Ahmed Leevan

އަޙްމަދު ލީވާން

Senior full-stack engineer, backend-leaning. Malé, Maldives.

leewan1704@gmail.com github.com/leewan-09 leewan.vercel.app kreating.co

Profile

I build the core of production systems and stay to keep them correct: schema, API, jobs, deployment and tests. Six years shipping in the Maldives, from a national public-engagement platform to booking, freight and finance systems, on TypeScript, Next.js, NestJS and Postgres.

Strengths

Workflows and approvals

Transactional booking states with expiring seat holds in Yoosuf Speed. Multi-step request approvals in Nine Sixteen procurement.

Data integrity and audit

Double-booking blocked in the database, not just the app. Audit logs in Yoosuf Speed, Furaaqu V2 and the Nine Sixteen cash book.

Dhivehi and right-to-left

Thaana type and right-to-left pages in Yoosuf Speed, Furaaqu V2 and Basvaaru. Hukit push previews never split a Thaana letter from its vowel.

Documents and PDF

TipTap rich-text editors in Furaaqu and SilverSmoke admin. My Rust HTML-to-PDF service has rendered **100,000+** tickets, invoices and résumés.

Testing and delivery

Tests on a real Postgres in CI: **217** test files in Furaaqu V2, **98** in Kreating HQ, **49** in Yoosuf Speed. Deployed with Docker and GitHub Actions.

Sign-in and access

OAuth and OpenID Connect with a consent screen in Kreating HQ. Role-based access in Yoosuf Speed, Furaaqu V2 and Maahdhaa4.

Experience

2020 to now

CTO, Kreating Works Pvt Ltd

Freelance studio from 2020, incorporated in September 2026

- Lead engineering for booking, freight, e-commerce and marketplace products for Maldivian clients, from scoping and architecture to deployment and support.
- Set the engineering standard for the company's work: typed API contracts, tests against a real database and automated deploys.
- Run two products of my own with subscription billing: **TaxFlow**, which turns invoice photos into MIRA input-tax statements, and **ShipContent**, an SEO content service for SaaS founders.

Jan 2023 to Jul 2026

Full-stack developer, Nine Sixteen Investments Pvt Ltd

- Principal backend author of Maahdhaa4.com, a national public-engagement platform, with **584 commits** over two years: NestJS API on a **54-model** PostgreSQL schema, real-time feeds over Socket.IO, polls and voting, and ID-card verification using Google Cloud Vision OCR and face detection.
- Built the NestJS API (**26 models**) behind the multi-outlet POS, and the revenue dashboard that syncs sales from the Ewity POS API into Postgres **every 30 seconds**.
- Co-built the internal finance suite: a multi-outlet cash book (denominations, transfers, currency exchange, deposits, audit log), procurement with approvals and purchase orders, and a market-research survey tool.
- Owned CI/CD for every service with Docker, GitHub Actions and DigitalOcean, reviewed code and mentored junior developers.

Jul to Dec 2022

Frontend developer, CodeAttest Ltd

- Built Vue.js interfaces in an Agile team on Azure DevOps, ran user testing and shipped the fixes.

Skills

Frontend	Next.js (App Router, RSC), React 19, TanStack Start, Query, Form and Table, Tailwind, shadcn/ui, TipTap, Expo, React Native, Flutter
Backend	Node.js, TypeScript, NestJS, tRPC, oRPC, Hono, REST, OpenAPI, Zod, Socket.IO, pg-boss, BullMQ
Data	PostgreSQL, Prisma, Drizzle, Redis, PostGIS, schema design, migrations, constraints, transactional writes, MySQL, MongoDB
Sign-in	Better Auth, NextAuth, OAuth, OpenID Connect
Delivery	Docker, GitHub Actions, NGINX, DigitalOcean, AWS S3, Cloudflare Workers, Vitest, Playwright
Integrations	BML payment gateway, Ewity POS API, Google Cloud Vision, Gemini, Dodo Payments, MCP
Also	Rust, Go, Python, PHP, Vue.js, Figma, PostHog

Selected projects

Yoosuf Speed

yoosufspeed.com
Client, 2026

Speedboat booking platform. Multi-stop routes modelled as legs, double-booking blocked at the database, and a transactional booking state machine with expiring seat holds, waitlist release and agent commissions. **28 models, 49 test files, six CI workflows.**

Next.js 16, React 19, tRPC, Prisma, PostgreSQL, Better Auth, pg-boss, Vitest, Playwright, Docker

Furaaqu

furaaqu.com
Client, since 2023

Speedboat ticketing for an operator running daily routes: bookings, e-tickets, schedules, agent leaderboards and SMS. Three years of continuous production changes, followed by a full V2 rebuild with **41 models and 217 test files.**

Next.js 16, tRPC, Prisma 7, PostgreSQL 18, Better Auth, Docker, GitHub Actions

Basvaaru

App on Google Play
Client

Content and operations platform behind a Dhivehi learning app: lesson authoring with video and audio, quiz banks, subscriptions, BML transaction tracking and Excel reporting. **26 models.**

Next.js, tRPC, Prisma, PostgreSQL, NextAuth, Docker

Kreating HQ

Internal, 2026

Back office for the company's money, projects, bids and documents, with a remote MCP server and an OAuth and OpenID Connect sign-in flow. **40 tables, 98 test files.**

TanStack Start, React 19, oRPC, Drizzle, PostgreSQL 18, Better Auth, Tailwind 4

Hukit v2

Client, 2026

Full rewrite of a services marketplace as a monorepo: Expo apps for providers and customers, Next.js admin, NestJS API and one shared Zod contract package. **358 commits since July.**

Bun workspaces, Expo, NestJS, Prisma 7, PostgreSQL, Playwright, Docker

TaxFlow

taxflow.run
Own product

Invoice photos become MIRA input-tax statements through a Gemini vision pipeline. Multi-tenant for accountants, credit packs through Dodo Payments with idempotent webhooks, and CI that checks production is serving the deployed commit before a release goes green.

Next.js, tRPC, Prisma, PostgreSQL, Gemini, Dodo Payments, Docker, GitHub Actions

PDF service

Source on GitHub
Own service, 2024

Rust HTML-to-PDF service driving headless Chrome, shared by Yoosuf Speed, Furaaqu, Naalu and ResumeFlow. **100,000+ PDFs** since November 2025, about 11,000 a month, with sub-second renders and a 98% success rate.

Rust, Axum, chromiumoxide, Docker, nginx, GitHub Actions

Naalu

naalu.furaaqu.com
Client, since 2024

Supply-boat freight portal for shipping goods between islands: trips, per-island rate codes, GST-aware invoicing with receipt uploads, Dhivehi invoice templates in Faruma, expense tracking and OTP login by mobile number.

Next.js, tRPC, Prisma, PostgreSQL, NextAuth, Docker, GitHub Actions

Barfume

barfumemv.com
Client

Fragrance storefront and catalogue admin. Money stored as integer laari, the server re-prices every quote and orders snapshot their line items. CI boots the real container against Postgres and runs black-box checks, including upload round-trips and path-traversal rejection.

Next.js 16, React 19, tRPC, Prisma, PostgreSQL, Better Auth, Docker

Other work

- Ride-hailing API for a Maldivian client, Phase 1: dispatch rounds, driver positions in Redis, live trips over Socket.IO and Swagger docs generated from Zod, on NestJS, PostGIS and BullMQ.
- Dhivehi Maps and Dhivehi Calendar: Flutter apps built for a client, on Google Play since 2023.
- Go service that verifies bank-transfer slips with OpenCV template matching and OCR behind a worker-pool API.
- Wellness Raagu: herbal e-commerce on the BML payment gateway, with callback verification and reconciliation against order state.

Education

Bachelor of Teaching Mathematics, Villa College, Maldives, 2021 to 2024
Edexcel International A Level in Mathematics, Physics and English, Sh. Milandhoo School, 2018 to 2019

Languages

Dhivehi and English
